

Cosmetic Dentistry

In the last decade we have seen major advancements in dental techniques and materials due to the demand for more aesthetically pleasing smiles. Gone are the silver and metal fillings of the past and now more than ever many patients are enjoying the benefits of restorations that are made of tooth coloured materials. Resins and porcelains are commonly used restoration materials today. They are chosen for their tooth-like appearance coupled with their natural feel and function.

Cosmetic dentistry also involves the overall improvement of your smile, such as the much advertised 'smile makeovers'. Improving the shape of teeth, the alignment of teeth and even replacing missing teeth are now highly sought after treatment solutions.

The results are fantastic and the benefits to your self-confidence and quality of life can be endless. A healthy smile is a happy smile and with cosmetic dentistry, your smile will shine.

Treatment - Your options can be varied and many results are achieved through the use of a combination of treatments. For example, veneers combined with whitening will offer a major improvement to a smile that is less than perfect due to discoloration and oddly shaped teeth.

Most importantly, successful cosmetic dentistry comes from treatments that not only improve your appearance but also offer long-term function and patient comfort. These factors are always considered when we recommend any cosmetic improvement.

About Sure Dental

Following the philosophy of our principal dentist Dr Ralph Kelsey, our aim is to prevent dental problems.

We encourage regular professional examinations. This allows immediate attention to potential problems and ultimately helps to keep your dental care costs to a minimum.

In addition to this philosophy, we offer complete dental treatment using the latest technology and most advanced materials.
