Crowns

A dental crown is a restoration that is used to restore a tooth to its original shape, strengthen a tooth or improve the cosmetic appearance of a tooth. This type of restoration is particularly ideal if your tooth has become unstable due to extensive decay or continual breakage.

Crowns are made from a highly aesthetic porcelain material. They are fabricated by our specialist ceramist using a detailed prescription following your crown preparation procedure. We will communicate with our ceramist to ensure that we have created a customised restoration that is colour matched and fits precisely to your tooth.

Crowns are a fabulous way to restore a tooth that has suffered the effects of decay or fracture. They can easily be cared for using your normal daily routine and offer a protective, long-term result.

About Sure Dental

Following the philosophy of our principal dentist Dr Ralph Kelsey, our aim is to prevent dental problems.

We encourage regular professional examinations. This allows immediate attention to potential problems and ultimately helps to keep your dental care costs to a minimum.

In addition to this philosophy, we offer complete dental treatment using the latest technology and most advanced materials.
