Teeth Whitening

Simple smile improvements are often the most noticed and for all the right reasons. For example, something as easily achieved as teeth whitening can make an enormous difference to a dull and lifeless smile.

Many seek this treatment purely to gain extra confidence when they smile. Others may want to undertake this treatment for a special occasion such as a wedding or reunion. Whatever the case may be, teeth whitening is a safe and successful way of lifting your smile.

Instant laser whitening - Also known as chair-side tooth whitening or one-hour whitening, this procedure involves the application of a specific gel to each tooth. This patented formula contains a key ingredient which is activated with a laser source. The agent then breaks down the tooth discoloration resulting in whiter teeth. This is the "true" laser system and is preferred by those looking for an immediate effect.

At home whitening - Using custom-made carefully fitted trays you can complete the whitening process at home at a time convenient to you. Many choose this option as they feel more comfortable whitening their teeth using a slower process in the comfort of their own home. The duration and frequency of application will vary depending on the severity of your discoloration, and the result may not be as significant or long-lasting as the laser process.

At Sure Dental, we offer these two options for whitening so that you can choose a process that suits your lifestyle and budget. We are happy to answer any questions you may have about our chosen whitening products. Our team is trained to advise you of the correct techniques and expected outcomes.

About Sure Dental

Following the philosophy of our principal dentist Dr Ralph Kelsey, our aim is to prevent dental problems.

We encourage regular professional examinations. This allows immediate attention to potential problems and ultimately helps to keep your dental care costs to a minimum.

In addition to this philosophy, we offer complete dental treatment using the latest technology and most advanced materials.
